 **Paras**

AI for Sustainability • SDG 12

About the project

Paras supports SDG 12: Responsible Consumption and Production.

Prototype note: disposal rules vary by location. Always verify special/hazardous waste instructions with your local authority.

Core model: **TF-IDF + Logistic Regression**

Optional AI: **Gemini API**

AI-Powered Smart Waste Segregation & Recycling Assistant

Describe an everyday waste item and get an AI/ML-supported category, disposal guidance, and sustainability tip.

Analysis Result

Predicted Category Special Disposal	Material E-waste	Guidance Type Special Disposal
---	----------------------------	--

- Recommended action:** Do not place in ordinary household waste; use an authorized e-waste collection/recycling route.
- Eco tip:** Repair, reuse or responsibly recycle electronics.

This prototype provides informational decision support; it is not a substitute for official local waste-management instructions.

- Dataset Insights
- Responsible AI**

Fairness

The prototype uses general waste descriptions and does not use personal characteristics.

Transparency

The category is produced by a TF-IDF + Logistic Regression classifier trained on the included sample dataset.

Ethics

The system avoids presenting uncertain disposal rules as universal facts.

Privacy

No personal information is required to analyze an item.

Safety & Local variation

Hazardous and e-waste items are flagged for appropriate handling. Recycling acceptance differs by municipality, so users should verify official local instructions.
